

ABOUT US

Kendrick Consulting LLC was established in 2004 and provides a broad range of services to the oil and gas industry. We are a small, woman-owned business enterprise located in Pittsburgh, Pennsylvania.

With over 20 years of combined experience, our team specializes in regulatory compliance and integrity management consulting to both large and small pipeline operators, including hazardous liquid and gas transmission pipelines, gathering systems, pipeline facilities, refineries, and terminals.

Our goal is to ensure compliance with current Federal and State regulations and nationally recognized industry standards, with a focus on safety, integrity, and reliability.

Our team provides important, middle-tier support between your company management team and software companies, tool vendors, contractors, and the regulatory community.

Kendrick Consulting LLC is owned and managed by its founders, Andrew Kendrick and Rita Emerick, who have been focusing on integrity management regulations and program design, implementation, and training since 2000. We have supported large and small operators in every aspect of integrity management, from jurisdictional determinations and preliminary HCA identification to ILI data review, preventive and mitigative measures analysis, facility risk assessments, and reinspection interval determinations.

Contact **Kendrick Consulting LLC** today for client-focused quality services and effective solutions to your regulatory compliance and documentation challenges! We know we can help!

- ◆ Employee Training

WHY KENDRICK CONSULTING?

Kendrick Consulting is viewed by our clients as a hands-on consultant and valuable business partner rather than just another contractor. We never sell template plans don't believe in the "one-size-fits-all" approach. Numerous times we have witnessed the unsuccessful attempts by operators to implement their off-the-shelf plans that often result in negative feedback from PHMSA. Instead, we work directly with the client to understand their operational challenges, corporate philosophy, and risk management approach. By working together with management, subject matter experts, and operators, we can design processes and procedures that address company-specific needs and can be efficiently implemented by the company's dedicated resources. Our goal is to design the procedures that are easily understood and accepted by your company's personnel.

At **Kendrick Consulting** we feel that client satisfaction is the greatest indication of our commitment, quality, and technical experience. We urge you to contact our clients directly for personal and professional references. Talk to your peers and ask what their experience has been with us. Contact information for our current and past clients can be provided upon request.
